CVT Temp [wrote:](#)

I mean, we can actually create a mathematical definition for evolution in terms of the evolutionary algorithm and then write code to deal with abstract instances of evolution, which basically equates to mathematical proof that evolution works. All that remains is to show that biological systems replicate in such a way as to satisfy the minimal criteria required for evolution to apply to them, something which has already been adequately shown time and again. At this point, we've pretty much proven that not only can evolution happen, it pretty much must happen since it's basically impossible to prevent it from happening.

Ugh, why you suggest me so much Last.fm?! Being me, it is hard to avoid the urge to check some out damnit! I have too much to go through already!

Though, there was a bunch it recommended I was like "Why the hell?....", and just removed them right there and then, but yeah.

I still want that damn better sorting on Spotify so I can put all my Post-Rock bands into like, one category, so the scrolling through all my playlists isn't such a pain....But nope, they have to try and make Spotify more of a web browser instead.....
