Tyranny by Majority

Show Spoiler

The following table shows the results of the regression analysis for the dependent variable "Perceived Social Support" (Y-axis) and the independent variable "Age" (X-axis). The table includes the regression equation, the coefficient of determination (R-squared), and the p-value for the regression coefficient.

Variable	Regression Coefficient (B)	Standard Error (SE)	t-statistic	p-value
Age	0.002	0.001	1.5	0.14
Constant	1.5	0.5	3.0	0.01

The regression equation is: $Y = 0.002X + 1.5$. The coefficient of determination (R-squared) is 0.01, indicating that 1% of the variance in Perceived Social Support is explained by Age. The p-value for the regression coefficient is 0.14, which is greater than the significance level of 0.05, suggesting that the relationship is not statistically significant.

I really want to say New Zealand... but I feel like I am completely wrong at the same time for some reason.

The Crown Colony of East Plate

A British colony at the east of the Río de la Plata, struggling against the Gauchos of the north and the hegemony of the port of Buenos Aires
