I mean, we can actually create a mathematical definition for evolution in terms of the evolutionary algorithm and then write code to deal with abstract instances of evolution, which basically equates to mathematical proof that evolution works. All that remains is to show that biological systems replicate in such a way as to satisfy the minimal criteria required for evolution to apply to them, something which has already been adequately shown time and again. At this point, we've pretty much proven that not only can evolution happen, it pretty much must happen since it's basically impossible to prevent it from happening.

Abeland - Dance In Space (Dream Fiend Remix)

Combine 80s synth sounds, 90s eurodance singing and beats with some distant latino music influences... yeah not really good.

Anima Damnata - *Prometheus Coprophagus*

And that's why I listened to the album **Agonizing Journey Through The Burning Universe And Transcendental Ritual Of Transfiguration** by Anima Damnata, because you can't go wrong with underground death metal.
