All that remains is to show that biological systems replicate in such a way as to satisfy the minimal criteria required for evolution to apply to them, something which has already been adequately shown time and again. At this point, we've pretty much proven that not only can evolution happen, it pretty much must happen since it's basically impossible to prevent it from happening.

Not sure of the title. It's some Mongolian throat singing. For a class on world music, one of those bullshit liberal arts/humanities classes they make you take under the pretense of making the engineering students well-rounded.

Wait an hour, and it will be now again
